

Deploy war on wildfly 18

1. Copy war file to "Wildfly_Home/standalone/deployments"
2. Then it will automatically deploy the war.
3. Brows: <http://127.0.0.1:8080/context-path/{any}> get type api}

Deploy war on specific port:

1. Go to configuration folder
2. Open standalone.xml
3. Define new ports – <socket-binding name="config-manager1" port="8099"/>
4. Add server under urn:jboss:domain:undertow
5. <server name="config-server1">
 <http-listener name="config-listener1" socket-binding="config-manager1"/>
 <host name="host1" alias="localhost" default-web-module = "module1">
 </host>
 </server>
6. Restart wildfly
